

Did you know?

Dinos in the Desert

Fact Explained: Some dinosaurs lived in hot, sandy desert environments very much like deserts we see today. The Gobi Desert in Asia is one of the world's greatest dinosaur fossil sites, where scientists have found eggs, babies, and even dinosaurs preserved mid-fight. Dinosaurs that lived in deserts had to find clever ways to stay cool and find enough food and water. Some may have migrated long distances to follow water sources.

Wow Factor: A fossil called the 'Fighting Dinosaurs' shows a Velociraptor and a Protoceratops locked in battle, preserved forever in the Gobi Desert sands!

Dino Challenge: Think about animals that live in deserts today, like camels or lizards. What body features help them survive? Could a dinosaur use the same tricks?
